

Safety inSight™

Approaching Safety Improvement from a Different Perspective
One Day Interactive Workshop

Imagine having an organisation comprised of employees where safety is at the forefront of their minds.

Imagine an organisation where employees take ownership of their safety and truly understand their personal risk profile.

Through heightened awareness, safe behaviours become the norm and at risk behaviours become the exception. Through individual *insight*, safety excellence is possible.

Safety inSight is a programme based on cognitive psychology. By helping participants understand their thinking styles as individuals, safer choices can be made. Safety inSight also enhances BAPP® by focusing on thought processes and the relationship to observable behaviours.

Safety inSight is the ultimate injection of awareness into your safety process and accelerates safety performance improvement.

Russell Consulting™
leadership – safety – people
